Figure Table NA

Category Name Design-CSS

Actionee HAIS

Sub Category

Subject Support Different Names for Reply-To and Errors-To

Description of Problem or Suggestion:

This section mentions sending mail to various types of destinations (e.g. C-CSS-61850 and 61400), but does not address the necessity for specifying Reply-To and Errors-To destinations which are different from the default (From). This requirement is especially critical for the API, which is likely to be used by processes started up under a "system" user id, whereas replies should be directed to actual DAAC people or groups.

As an example, the GSFC DAAC V0 Data Server sends a mail message to users when FTP data is ready for staging, but is run under a made-up user id that corresponds to no actual person. The Reply-To field is used to route automatic replies to the DAAC User Services Office. The Errors-To field also routes errors to USO, though this may be changed to the system manager in the future.

Originator's Recommendation

Add requirements to specify that errors and replies be sent to 3rd parties. Also add a requirement to be able to configure where errors and replies should be sent.

HAIS Response Date 3/6/95

CSS agrees that the third part destinations like Reply-To and Errors-To fields will add value to the e-mail service. Impact to the design of adding these requirements is being considered and will be addressed by CDR.
